

RESA Power

RESA Power, headquartered in Houston, TX, is a leading provider of high-end, mission-critical electrical equipment services and products for industrial, commercial, institutional, government and utility end-users across North America.

The Company has a deep pool of technicians and sales engineers who deliver top-rated customer satisfaction, rapid response service, and creative product-based solutions. RESA Power has 16 primary service centers and distribution facilities across the U.S. and Canada, maintaining one of the largest inventories of power distribution and control equipment in North America. RESA Power specializes in various niche power distribution & circuit protection services and products such as testing & maintenance, engineering services, maintaining obsolete & hard-to-find inventory, and fast quote-to-delivery capability on legacy and current model equipment.

RESA Power benefits from a growing industry due to an aging electrical infrastructure, a predominantly MRO-centric demand profile and a fragmented market in which RESA Power serves as a “consolidator-of-choice” for smaller local and regional operators. RESA Power is actively seeking acquisitions / partnerships with regional operators of complimentary electrical service businesses.
